

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Frontend:** React.js, Next.js 15 (App Router, RSC, Suspense, Streaming), Vite, Tailwind CSS, WebSockets
- **Backend & Databases:** Python (FastAPI/Flask), Node.js, Express.js, MongoDB, REST APIs, Webhooks, Vector DBs (Chroma/Pinecone)
- **State & Data Fetching:** Redux, Context API, tRPC, React Query, Zustand
- **Tools & Deployment:** Cursor, Vercel, Docker, Git
- **AI:** LLM API Integration (OpenAI API, Anthropic API)

PROFESSIONAL EXPERIENCE

Lead Frontend Engineer (Contract) | Shipyard (AI-Agentic Coding Startup) | *April 2026 - May 2026*

- **Architected AI-Native UI:** Led the frontend architecture for an "anti-vibe-coding" agentic orchestrator, bridging a highly responsive React / Vite / TypeScript client with a Python backend to handle complex, stateful LLM workflows.
- **Real-Time API Integration:** Engineered a custom live chatbox interface, managing complex asynchronous state and API routing between the React frontend and external Python data streams with zero UI blocking.
- **Technical Leadership:** Acted as the sole Tech Lead, collaborating directly with the founder and UI/UX lead to define product scope, while aggressively triaging and managing open-source UI contributions to protect repository integrity.

Full Stack Product Engineer | July 2023 - Present

Project: CareConnect (Clinical Collaboration Platform)

Links: [[Demo](#)] | [[Github](#)]

- Built a full-stack clinical collaboration platform where healthcare professionals can create patient cases, discuss diagnoses, vote on treatment recommendations, save cases, and collaborate across medical specialties using role-based access controls.
- Implemented secure authentication, authorization, and RBAC workflows with Next.js App Router and MongoDB, supporting distinct permissions for administrators, clinicians, and standard users while protecting sensitive patient information.
- Integrated AI-assisted clinical analysis using OpenAI APIs, enabling users to generate differential diagnoses, validate treatment approaches, and receive real-time responses through Next.js Streaming and React Suspense.
- Designed scalable backend services using Server Actions, Zod validation, MongoDB indexing, and recommendation algorithms that personalize case discovery based on user interactions, specialties, and engagement history.

Project: ShipSpace (B2B Client Portal SaaS)

Links: [[Demo](#)] [[Github](#)]

- Architected a complex multi-tenant B2B client portal utilizing Next.js 15 and Payload CMS, successfully engineering strict RBAC to isolate data environments for distinct agency clients within a single monolithic codebase.
- Engineered advanced data flows and optimized dashboard data fetching using React Query and tRPC, heavily reducing server load and ensuring real-time state synchronization across concurrent multi-tenant sessions.
- Integrated automated subscription tiering and payment workflows via Stripe webhooks, building secure, resilient monetization pipelines directly into the user interface.

Project: Visual Experience Engine

Links: [[Demo](#)] | [[Github](#)]

- Developed a performance-optimized, cinematic landing page (GTA VI concept) featuring complex, scroll-triggered DOM animations.
- Achieved stable 60fps performance on main-thread animations by leveraging GPU acceleration, reducing React reconciliation overhead by 40%.
- Optimized Core Web Vitals (LCP/CLS) to sub-100ms scores, ensuring high-fidelity rendering and zero layout shift on consumer-grade devices.

EDUCATION & CERTIFICATIONS

- **Bachelor of Computer Applications (BCA)** | ISBM University
- **Certifications:** Next.js 15 Masterclass, Frontend Animation Mastery (GSAP), QA & Reliability (Backend Testing).
